DIY

or everything about assembly

Incorrect assembly, gluing or installation may result in the destruction of the element or the entire structure, and therefore additional costs and waiting time.

When the new kitchen is delivered, you should check that the package contains all the necessary elements. The easiest way to compare this is with the list from the order. Do not start dismantling the old kitchen until all the new elements are complete. It is a good idea to arrange the packages with furniture and household appliances in the order in which they are to be assembled.

Modular kitchens designed for self-assembly are delivered to the recipient in packages. If we decide to do the entire installation ourselves, we should divide the work into stages and prepare well for them.

Before starting work, disconnect all utilities in the room and turn off the electricity, water and gas supplies.

Tools

Most assembly instructions include information about the tools needed for a given element, but it is worth making one common list and completing everything at once. The list should include, among others: a pencil, a tape measure, a drill/driver, a spirit level, a flat screwdriver, a Phillips screwdriver, an angle saw, a hand saw, a rubber hammer, a carpenter's clamp. A circular saw and a cutter for cutting a hole for the faucet in the sink may also be useful. Some of the tools depend on the type of walls to which the furniture will be mounted. It is worth determining this before starting assembly and choosing the appropriate fasteners on this basis.

Layout

Once you have all the furniture, appliances and tools, you can start sketching the kitchen on the walls. It is worth marking the individual dimensions with a pencil, checking whether the layout of the water and gas supply, the electricity supply and the location of the ventilation holes match the plan.

It is also a good idea to use a spirit level to mark the places where the strips for hanging the cabinets will be installed, remembering that the minimum space between the countertop and the bottom of the upper cabinets is 56 cm.

Assembly of bodies

In order for the work to proceed smoothly, first assemble the wall cabinet casings, according to the assembly instructions. If the kitchen is to have a corner cabinet, it is a good idea to start mounting it. It will then be easier to fit the next cabinets. After hanging all the upper elements, you can start mounting the lower bodies of the standing cabinets. Remembering the attached instructions. We also start the installation from the corner, leveling the level by adjusting the legs. When the cabinet casings are already in place, it is time to mount the countertops, sink, lighting and household appliances.

Countertop, sink, stove

Before drilling and installing the countertop, it is worth making sure that it has the right dimensions. Cutting holes in the countertop for a sink or hob should be entrusted to a carpenter because this task requires skill and the right equipment. The edges of the cut hole should be protected with sanitary silicone or another agent that protects against moisture. It's time to attach the countertop, install household appliances and lighting. Everything should be done according to the instructions. Water, gas and electrical connections should be entrusted to qualified specialists.

Installation of shelves, drawers, doors, knobs and handles

The next step is to install drawer runners, shelf mounts and door hinges in the cabinets. Here you should also follow the instructions included with the individual accessories. Finally, you attach knobs and handles and assemble the internal fittings of the cabinets.

Next, screw the hinges to the door, attach them to the bodies and align the door with screws on the hinges. Next, screw the drawers together and slide them onto the guides in the body. The crowning achievement of all the work is the assembly of the plinth.

Cabinet Care

To enjoy your self-assembled kitchen for as long as possible, you need to take proper care of it. It is best to use a soft, damp cloth to clean doors, wooden surfaces and the inside of cabinets. Avoid products containing ammonia or alcohol, bleach and abrasives. It is also worth drying the countertop after each splash.

ecoModel PRO from the kitchen

UPPER CABINETS

Cabinet height - 60 cm, depth 32 cm (with front).
As standard, the cabinets are equipped with soft-close hinges.

LOWER CABINETS

Cabinet height - 82 cm (including legs 10 cm), depth 46 cm (with front).
As standard, the cabinets are equipped with soft-close hinges.

BODY

16 mm thick laminated board in white.

PLINTHS

The cabinets are set on 10 cm plinths made of carcass board.

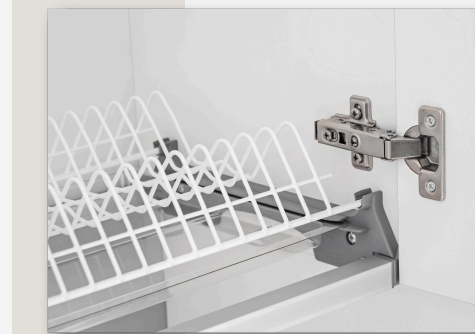

CABINET WITH DRAINER WS 6/60, WS 8/60

As standard, it is equipped with a two-level dish drying rack.

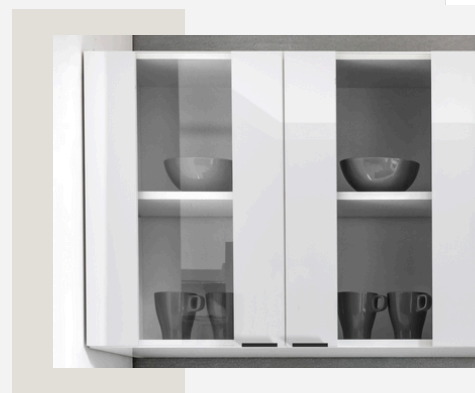

HINGE WITH INTEGRATED BRAKE

Makes the cabinet close smoothly and quietly.

SHOWCASE - CABINET WW 8/60

Contains clear tempered glass.

HOOD CABINET WO 6/36 SLIM

It is adapted to an under-cabinet hood.

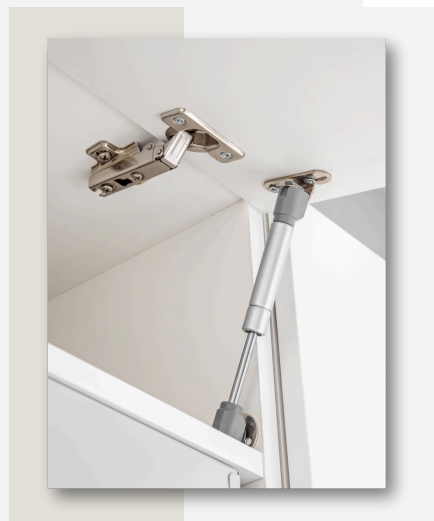

BRAKE

The optional brake ensures quiet closing of the drawer.

SUPPORT

Makes it easier to open the front and prevents it from falling down.

SIDE PANELS

Made of front board, dedicated to upper and lower cabinets and posts. The grain of wood-like panels is horizontal.

HANDLES

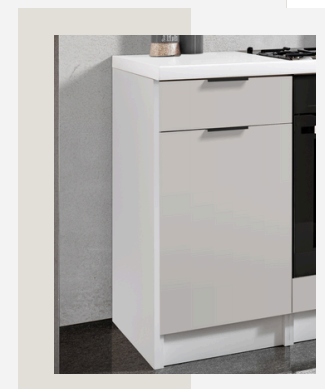

Each cabinet, except for the showcase cabinet, contains a handle with a spacing of 80 mm (total length of the handle 100 mm). The showcase cabinet is supplied with a handle with a spacing of 32 mm (total length 52 mm).

Color choices: matte black (E1 or matte gold (E2).

DRAWERS

The lower cabinets can be equipped with one or three drawers. The drawers are made of a body board with a white roller guide.
